

## **PREFERM S**

---

### ***A COMPLETE PREPARATION FOR A STEADY AND HEALTHY FERMENTATION***

**PREFERM S** is a specific preparation containing derivatives of yeast, vitamins, assimilable nitrogen and cellulose.

#### ***SPECIFIC CHARACTERISTICS:***

**PREFERM S** allows:

- a **good start of fermentation** while supplying the entire pool of nutrients necessary to the yeasts (vitamins, sterols, assimilable nitrogen) to stimulate starts of fermentation,
- a steady and healthy fermentation,
- in case of high alcoholic potential degree, the addition of **PREFERM S** allows the rapid **completion of the alcoholic fermentation**,
- to avoid excessive production of volatile acidity,
- assists the yeast in the **formation of aromas**,
- to compensate for the lack of nutrients in the initial must (too low turbidity, needs of nutritive elements).

#### ***RECOMMENDATION OF USE***

**PREFERM S** must be dissolved in 10 times its weight of water, at a temperature from 20 to 30 °C, carefully homogenized and then added the rehydrated yeast.

**PREFERM S** once rehydrated, can be directly added into must although before the inoculation of dry yeasts.

#### ***DOSAGE***

From 100 to 300 ppm.

#### ***STORAGE***

Sealed bags may be stored in a cold and dry place, away from contaminants and chemicals with intense odours.

#### ***PACKING***

Bags of 2.5 kg.

**CONFORMS TO THE INTERNATIONAL OENOLOGICAL CODEX**
