

PREDTAN SEEDS

FACILITATE THE CLARIFICATION AND STABILIZE WINE COLORING MATTER

PROPERTIES

PREDTAN SEEDS is pure grape seed tannin. Thanks to the production by extraction and following selective purification of the grape seed phenolics, **PREDTAN SEEDS** is very pure and has good organoleptic properties

APPLICATIONS

PREDTAN SEEDS is a proanthocyanidine-type tannin and specifically designed for red winemaking. It is naturally efficient in favouring tannin-anthocyanin polymerisations through the formation of acetaldehyde bridges thus allowing superior red wine color stabilization.

Thanks to its anti-oxidative properties, **PREDTAN SEEDS** ensures good protection against oxidations and contributes to the preservation of red and rosé wine hues during ageing.

PREDTAN SEEDS contributes to wine balance by providing more tannic structure.

DOSAGE

It is recommended to use **PREDTAN SEEDS** at a dosage between 5 to 20 g/hl of red and rosé wine after dilution in wine. The dosage, and therefore the treatment cost, can be optimized by doing direct trials in bottles at different concentrations.

After **PREDTAN SEEDS** has been added, it is recommended to carry out normal racking until bottling preparation.

It is recommended to add **PREDTAN SEEDS** at least two weeks before bottling.

STORAGE

Sealed bags may be stored in a cold and dry place, away from contaminants and chemicals with intense odors.

PACKING

Pot of 500g.
